Project Requirements

Student Syllabus & Learning Management Portal

1. Functional Requirements

1. The HOD login must provide access to all modules of the system.
2. The login module must allow a new student account to be created, and the student must then be able to log in using those credentials.
3. The syllabus upload/approval process must be completed within a defined turnaround time.
4. The Model Question Paper module must include previously used model/test question papers.
5. Using each student's test details (tracked by week or by performance level), the system must send a notification to students who missed a test in a given week, prompting them to take a repeat test.
6. The Faculty module must allow faculty details to be added along with the students assigned to them.
7. The "Add Student" module must require a Student ID and must be linked to the faculty member who added the record; this should include a working demo/preview before the upload is finalised.
8. The upload feature must support adding external material such as reference/YouTube video links and other relevant learning content.
9. A search box must allow searching by department; the syllabus search must also support free-text search that matches against the syllabus content.
10. When uploading a syllabus, the subject code must be a mandatory field; once added, the syllabus should be viewable.
11. The Model Question Paper module must require a subject code to be entered.
12. The Quiz Generator module must also require a subject code to be entered.
13. The Student module must display the syllabus along with its current status.
14. The Model Question Paper module must include full test content/details.
15. Once a student completes (attends) a quiz, the result details must be shown to the concerned faculty member.

2. Subject Codes and Syllabus Names

Syllabus modules are to be uploaded/sent in PDF or image format, mapped against the following subject codes:

S.No.	Subject Code	Subject / Syllabus Name
1	23UIVCC4	Java Programming
2	23UIVCES4	To be confirmed – subject name not specified in the source notes

3	23UIIICCS3	Data Structures and Algorithms
4	23UVDECS2	Multimedia Systems
5	23UVCESQ5	DBMS and PL/SQL Lab
6	23UVICSS8	Computer Networks
7	23UVDECS1	Web Programming with PHP
8	23UIICC2	Object Oriented Programming with C++
9	23UICCS1	Python Programming
10	23UIFCCS	Problem Solving Techniques

Note: The code "23UIVCES4" appears in the original handwritten notes without an accompanying subject name. Please confirm the correct subject/syllabus name for this code so it can be updated in the final document.
